I REVOLUTION A DATA DRIVEN EXPORATION OF

APPLE'S IPHONE IMPACT IN INDIA

1. INTROUCTION:

On January 9,2007,Steve Jobs announced the first iphone at the Macworld convention, substantial media attention. On June 11,2007, Apple announced at the Apple's Worldwide Developers Conference that the iphone would support third party applications using the Safari engine. revoluthionary mobile phone and a breakthrough Internet communicator iphones are famous for their privacy and security systems. They offer security features like facial or fingerprint authentication to protect your personal information.

1.1 Overviews:

Our project is about I Revolution a data driven exploration of apple's iphone impact in india then there data analysis.

1.2 Purpose:

Cellular phone into one device with a touchscreen interface.
Iphone devices have some of the best cameras in the market.

2. PROBLEM DEFINITION:

One of the common problems associated with an iphone is quick battery drainage. The best solution is to turn off the unwanted apps that you are using. If the iphone battery issue still exists, It is advisable to contact a service provider as soon as possible.

DESIGN THINKING:

You can create a user-friendly and attractive iphone app design by keeping some important things in mind, such as the correct placement of UI elements and knowing how to create an intuitive UI design thinking enabled apple to reach the greatest heights in the market, and take over the world of technology in all aspects ,be it usability, design or User Interface.

2.1 Empathy Map Apple Iphone

2.2 Ideation& Brainstorming Map screenshots

3. RESULT:

The iphone is a popular choice among students for its sleek design, user-friendly interface, and advanced features.

4.ADVANTAGES:

- ❖ The iphone has an intuitive user interface that makes it easy to navigate.
- ❖ The touch screen interface is easy to use, and the iphone's smooth operating system is simple to learn and use.
- ❖ iPhone has great build quality and durability.
- ❖ You will be able to work easily.
- ❖ The iphone performs so much better compared to Android smart phones due to its superior processors.
- ❖ Apple does not rely on processor chip manufactures for its hardware.

DISADVANTAGES:

- ❖ One of the disadvantages of the iphone is that it has limited customization options.
- ❖ Infuriatingly high prices, lack of commonly available features, no gaming support, lack of design options, and a very exclusive ecosystem.
- ❖ The high fiber contents of apples can lead to gastrointestinal issues, including loose stools and sometimes diarrhea, according to WebMD.
- ❖ These include the fact that on average, the iphone has a lower quality of battery life.
- ❖ Another con of getting an iphone is the low storage due to the absence of a micro SD card.

APPLICATION:

An iphone app is an application , typically developed by a company other than apple and designed to be used specifically on the iphone or ipod touch. Apps work much like user-installed software on a computer and allow the phone to perform specific tasks that the user wants or needs.

CONCLUSION:

The Conclusion apple and the iphone is a great example of a corporation making what the consumer wants in a global market. With limited companies competing, competition for the best phone on the market is at an all-time high.

FUTURE SCOPE:

Iphone development is seen to have emerged as a lucrative business venture in the recent past. Global mobile app development companies have started hopping on iOS. Not without reasons. Apple's relentless focus and commitment toward providing what is best to their users, and its constant endeavor of ensuring absolute security to developed apps have been the driving factors for this popularity.
